

## WINNICA TURNAU WINO X BIAŁE

### WINE DESCRIPTION

Wine X white is a blend of Seyval Blanc and Johanniter from the 2024 vintage. It is characterized by intense fruit aromas with notes of kiwi and lime. On the palate, peachy sweetness harmonizes with the acidity of green apple. Light and refreshing. Matured and crafted at the family-owned Turnau Vineyard.

### WINE AROMAS

apples, pears, gooseberries, peaches

### TASTE OF WINE

apples, passion fruit, citrus fruit

### FOODPAIRING

Dishes with goose, St. Martin's croissants, pâtés

### WINE PARAMETERS

**residual sugar:** 17,7 g/l

**acidity:** 7,7 g/l

**alcohol content:** 10,5%

### GRAPE VARIETIES

90% seyval blanc 2024, 10% johanniter 2024

### VINIFICATION

Fermentation in a stainless-steel tank.

### TERROIR

Winnica Turnau is located in Baniewice, in the southwestern part of the West Pomeranian Voivodeship. This unique region is influenced by air masses from the Atlantic Ocean and the Baltic Sea, as well as the proximity of the Oder River. All these factors shape a climate characterized by a long growing season, warm summers, and mild winters. Such conditions favor the cultivation of demanding grape varieties, allowing them to reach optimal ripeness while maintaining high acidity. Our region is distinguished by a rich network of oxbow lakes, gently rolling moraine hills, and an abundance of flora and fauna. The vineyard is situated on a moraine hill, where the predominant soils are sandy-clay, clay, moderately compact, and moderately permeable. This terroir, combined with ecological viticulture, results in grapes of exceptionally high quality.

### WEATHER DURING THE GROWING PERIOD

The winter of 2024/2025 was warm, with only a light snow cover. Spring was dry, and the lack of water at this stage was not beneficial for the vines. In April, frost occurred and lasted for more than a week, with temperatures dropping to -6°C, causing significant losses in the later yields. May was extremely cool, which did not support vegetative growth. Flowering began in early June. July brought very high temperatures, and until mid-August heavy rainfall persisted, creating a considerable risk of fungal diseases.
