

WINNICA TURNAU SZLACHETNY ZBIÓR 2024

WINE DESCRIPTION

A unique wine that was created thanks to the proper conditions in autumn, when botrytis cinerea, known as noble rot, appears on ripe grapes. It causes the skins to crack, which makes the evaporation of water from the berries and the concentration of sugar and organic acids. Thanks to this, the wine gains density and sweetness, supported by solid acidity. It smells fruity with a hint of honey. In the mouth, it surprises with its full consistency and the taste of sweet pear. Chilled to 11 degrees, it is ideal for dessert.

WINE AROMAS

honey, pears

TASTE OF WINE

orange, pears

FOODPAIRING

cheeses, pates, desserts

WINE PARAMETERS

residual sugar: 85 g/l

acidity: 7,5 g/l

alcohol content: 11,5%

GRAPE VARIETIES

solaris

VINIFICATION

Grapes partially covered with botrytis. Fermentation in stainless steel.

TERROIR

Winnica Turnau is located in Baniewice, in the southwestern part of the West Pomeranian Voivodeship. This unique region is influenced by air masses from the Atlantic Ocean and the Baltic Sea, as well as the proximity of the Oder River. All these factors shape a climate characterized by a long growing season, warm summers, and mild winters. Such conditions favor the cultivation of demanding grape varieties, allowing them to reach optimal ripeness while maintaining high acidity. Our region is distinguished by a rich network of oxbow lakes, gently rolling moraine hills, and an abundance of flora and fauna. The vineyard is situated on a moraine hill, where the predominant soils are sandy-clay, clay, moderately compact, and moderately permeable. This terroir, combined with ecological viticulture, results in grapes of exceptionally high quality.

WEATHER DURING THE GROWING PERIOD

Winter 2023/2024 was frosty, with little snow cover. The beginning of spring was quite warm, which allowed vegetation to start much earlier than in previous years. In April, there was a week-long frost with high negative temperatures, reaching even -8 degrees. May was quite warm and dry. July was the rainy. Harvest started earlier than usual (mid-August) and ended in early October.
